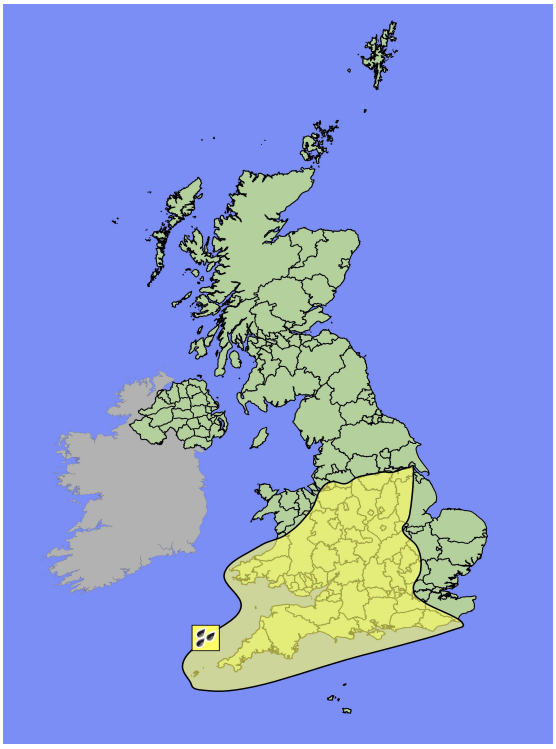
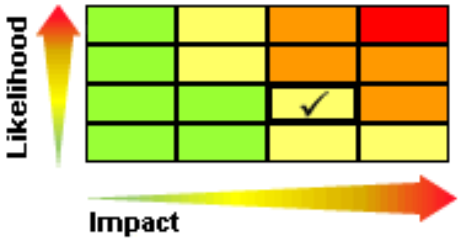
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure is expected to develop and move northeastwards across western England and Wales during Thursday, bringing with it periods of rain, heavy and prolonged in places. At this stage, the heaviest rain is expected to affect southern and southwest England, the Midlands and southern areas of Wales. Rainfall totals, of 15-25 mm are expected fairly widely with as much as 40 mm in places, this mostly falling within 6 to 12 hours (some of this will have already fallen across the southwest during Wednesday evening). The exact track of the low is still subject to some doubt, but with the potential for heavy rain falling onto already saturated ground, the public should regularly monitor for updates to the warnings.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:05 on Thu, 20th Dec 2012** until **18:00 on Thu, 20th Dec 2012**

Heavy rain is expected across parts of England and Wales during Thursday.

Given that the ground is already saturated in many areas, the public should be aware of the risk of flooding.

This is a further update to the warning issued on Tuesday and includes a larger area of risk. Please also refer to the amber warning where the risk of disruption is greater.
